

Torc Ground Anchor Series II

The new Torc Ground Anchor Series II is the highest-rated ground anchor on the market and is still an easy fit with DIY tools to concrete floor, brick wall or van/bike safe. It is tougher, easier to install, and cheaper than the highly praised Series I design (that was awarded Security Product of the Year 2006).

It is British made, uses four high tensile fixings for maximum strength without requiring an industrial drill to fit (a drill bit is included), and is the only ground anchor that is Sold Secure Gold approved in every category (Concrete Floor fitting, using hi-tech but still easy to use chemical resin capsules - these are actually easier to fit and much stronger than expanding bolts!). It uses a 20mm hardened steel shackle that folds flat when not in use. The shackle forms a complete 'D', meaning that a thief would have to cut it twice in order to defeat it - that would be two cuts through 20mm diameter hardened steel! The Torc ground anchor is designed to suit 16mm/19mm and other high security chains. Zinc phosphate treated and powder coated for corrosion resistance. The Torc ground anchor is a Registered Design.
