Well what a 12 months it’s been! It’s certainly been “full steam ahead”.

Having performed a full review of our test specifications and launched the new website, this year saw us concentrate on maximising the promotion for approved products and developing some enhanced levels to specifications to promote even higher levels of security.

To this end we now have an extra “Diamond” level in 2 of our test specifications; SS312 (Lock Cylinders) and SS203 (Tracking Devices). We also created a new Bronze level for SS314 (Security Cabinets). The reason for this was to be able to test key safes, something that the insurance industry in particular have been requesting, and having looked at a number of products out on the market which can be opened in literally seconds it’s no wonder!

The promotion started early in the year with Sold Secure sponsoring MLA leaflets that were given out at Help the Aged (now Age UK) roadshows. This then progressed with a stand at the ACPO/SBD Police Architectural Liaison Officer / Crime Prevention Design Adviser training convention (where boxes of the catalogue flew of the shelves!), a stand at the prestigious HOSDB exhibition – a must attend event for police and government officials and then further work with the Met police, Hampshire and South Yorkshire forces. The promotional year finished off with a presentation to an audience of senior insurance executives highlighting the importance of using independently tested and accredited products.

During the year Sold Secure once again maintained its ISO 9001 approval with flying colours. It’s vital that we adopt our own mantra and get our own independent verification of our quality procedures etc.

At the time of writing the audits are still being performed but it’s looking like 2010 will be showing record results for Sold Secure which bearing in mind the prevailing economic climate is particularly pleasing. I’d like to take this opportunity to thank our staff, testers, customers and partners for their help over the 12 months and welcome you to this new format Sold Secure Catalogue.

I sincerely hope you enjoy this new catalogue and look forward to providing you with plenty of information on the successes and hopefully newly approved products in next year’s catalogue.

Yours Sincerely

We manufacture, in our own factory, ALL Sold Secure products to the exact standard as the approved product.

We DO NOT supply Chinese interpretations of approved products.

**ADDITIONAL CARAVAN SECURITY PRODUCTS**
You’ll read a lot about Sold Secure in this catalogue but if you’re a manufacturer why should you have your product approved? What do you actually get for your money and why choose Sold Secure over other test houses?

Firstly it’s important to realise the benefit of independent third party testing. Whilst you may believe that you have the proverbial “best product in the world” and have your own test reports to prove it, but then in the eyes of the general public or customers then you would think that anyway – you want to sell product and therefore the perception may be that you’d “say anything” to sell it. However, if an independent third party, who has no vested commercial interest, says that the product has met a certain criteria, then it adds gravitas to the claims about the product.

The next thing to look at is what testing it’s claimed to have met. Yes manufacturers will have their own in-house test specifications but what do these actually mean. You’re better off testing to a recognised standard, something that people will understand and recognise. Yes you can test to British Standards or European Norms and in some cases then this is arguably a very well recognised standard, but does it go far enough. Do they reflect what is happening out there in the field; mimicking what thieves are doing? This is where the Sold Secure test specifications come into their own. Developed in conjunction with the relevant stakeholders (including police, insurers and the appropriate industry bodies) they are mostly based on attack test principles, using a certain amount of time and tools (depending on grade) for the product to be defeated.

So why choose Sold Secure? First and foremost there’s the recognition. Sold Secure is recognised not only by the public, but most importantly by the Police Crime Prevention Design Advisors (who promote the use of Sold Secure approved products) and insurers (a number of whom will require Sold Secure Approved products to be used in order to either provide insurance or provide a discount on the insurance premium). How do we know this; first and foremost based on the number of calls and e-mails we get from insurers directly and from the public highlighting how they need to verify approval for their insurance, and secondly from the beeline the CPDA’s make for the Sold Secure stand at any event we’re at, eager to get their hands on the latest Sold Secure Approved Products catalogue.

Another major benefit of using Sold Secure, according to feedback we get from customers, is the way we work with our customers. We’ve heard horror stories of other test houses taking in products and then sending back a “bag of bits with a fail notice”. Sold Secure prefers to work with its customers to help improve the quality of products out there in the market place. We offer an initial free consultation to explain how the product will be attacked, look for any obvious weaknesses in the design/construction (whilst it’s no guarantee that a product we pass, we feel that taking in a product for testing knowing that it’s going to fail, whilst commercially perhaps more attractive in the short term, would be counterproductive for our desire to build long lasting relationships with our customers). We can also give an indication of what specification it should be submitted for and which grade it may be able to achieve.

Last and by no means least there’s the extra marketing support that can be obtained by Sold Secure Approval. All products that have passed Sold Secure test specifications are included in the Approved Products Catalogue whilst all products tested are included on the website, which not only provides contact details for the customer but also the ability to include a picture and detailed description of the product too. Don’t forget the Sold Secure website is linked to by many authoritative websites including the Government.

So, if you’ve got a product that you think is suitable and want the benefits of approval, contact Sold Secure on 01327 264687 or sales@soldsecure.com to discuss getting your products approved.
The attack test centre of choice for security devices

To get your products tested, gain the coveted Sold Secure approved logo and feature in the next edition of this catalogue then please contact us.

Sold Secure

History
Sold Secure was established in 1992 by Northumbria and Essex Police who combined 2 initiatives, Sold Secure and Partnership Against Car Theft (PACT) top form Sold Secure with the help and backing of the Home Office. Sold Secure is now administered by the Master Locksmiths Association, in its premises adjacent to the MLA’s Head Office just outside Daventry.

Purpose
Sold Secure provides test and assessment services of effective security products to commercial customers, the insurance industry, the Home Office, the Police and the public and is a company dedicated to reducing the risk of theft by the assessment of security products.

The scheme has close ties with a number of constabularies and insurers who provide regular information regarding the methods of theft and the tools utilised by criminals in their area. This helps to maintain an up to date specification and means security products can be assessed in the light of the risk they are likely to encounter when in use.

Organisation
Sold Secure is made up of a small team of dedicated staff. Steve Warren is Lab Manager looking after operations for the company as well as performing the majority of audit testing and managing any external testers who are brought in. Lesley Robertson, who is the Administrator, looks after all the paperwork and the accounts. Sold Secure also call on the services of Steffan George for business development and general management as well as Justin Freeman, the MLA’s Technical Manager for extra technical assistance such as writing new standards for testing and signing off reports etc.

The company has its own board of directors who meet on a regular basis to ensure the running of the company is going according to plan. It’s important to note that the company is a completely separate entity to the MLA, with its own staff, own legal entity, own board, separate accounts etc.

Testing, Assessment and Approval

Why Test?
Security product manufacturers make various claims with regards to the security of their products, but what do these claims actually mean? By developing relevant test specifications with the involvement of the relevant stakeholders (e.g. Police, Insurance, Industry Bodies etc), as well as adopting relevant BS/EN test norms where appropriate, Sold Secure can test all products to these standards and provide the public with an understanding of how that product performs against the standard, as well as against any competitor products.

One of the main drivers for product testing is insurance recognition and recommendation. Many insurance companies understand the benefits of specifying Sold Secure products in reducing the likelihood of theft and the subsequent claim and will actively encourage their customers to use the products by giving discounts on policies where Sold Secure products are used or in some instances insisting that Sold Secure approved products are used in order to provide cover at all.

The police also recommend Sold Secure products with Crime Reduction Officers particularly vocal in their recommendation and always making a beeline for the Sold Secure stand at any exhibition to get their latest copy of the Sold Secure Approved Products catalogue.

The Association of Chief Police Officers own accreditation company Secured by Design also recognize the benefits of Sold Secure testing and use the approval as part of their accreditation process, thereby pointing a number of manufacturers our way for the attack testing to give SBD confirmation of the integrity of the product.

Manufacturers and suppliers can apply to have their products approved by Sold Secure. Products which have been satisfactorily assessed may bear the Sold Secure Quality Mark.
The tests are carried out to strict criteria set out in Attack Specifications drawn up in conjunction with interested parties, such as insurers, police forces as well as industry specific organisations such as the Caravan Club for example. It’s important to note that the interested parties do not include manufacturers, which allows Sold Secure to be independent of any vested interests.

The testing is carried out in-house with a team of approved testers, all of whom are Master Locksmiths in their own right or experts in their field. By using this highly experienced team of testers it is possible not only to ensure continuity but also to act as a “worse case” type scenario due to the significant product knowledge and attack methods knowledge held by the group.

As well as testing to the Sold Secure standards, testing can also be carried out to a range of European Standards, such as EN14450 for safe testing for example. Also, some of the Sold Secure specs refer to European norms such as EN12209 & EN1303.

Sold Secure differentiates itself from its competitors by helping the manufacturers understand the testing involved and how to improve their products. They always suggest that when a customer has a new product they’re thinking of getting approved they bring it for an initial consultation where they can evaluate the product and what category and level we feel it should be aimed at. We can also provide some up front consultancy on any areas of weakness we may find, thereby saving the manufacturer what could otherwise be a costly test. Whilst commercially Sold Secure may make more money by testing something it immediately knows will fail, they quite rightly feel that it makes far better long term business sense to build relationships with our customers and help them improve their products and ensure they retain them as customers.

Approval Categories
As you will see from the information below there are several categories that Sold Secure test to and each category uses one of three levels of resistance, Gold Silver and Bronze, excluding the caravan and tracker categories which have an additional Diamond level of attack resistance.

The attack specifications vary for each category in the types of attack and tools used in the test. Higher value products have much tougher tests than lower value products where the attack is less likely to be planned or the thief well equipped. For example bicycle attacks are carried out using lighter tools and no power drills as the theft is more likely to be opportunistic rather than planned. Caravan security devices however will need to withstand attacks using drills and large pry bars, amongst other things as they are more likely to be planned and executed by more professional thieves due to the value of the item.

Motor Cycles & Motor Scooters
Around 50,000 motorcycles are stolen in this country every year. Many of these are broken down for spares and less than a quarter are ever recovered. A very high percentage of those stolen are actually taken from outside their owners’ homes. It may be interesting to note that a bike parked in a busy main road may sport several security devices but when parked at home the bike may be left unsecure.

Sold Secure has a single level of Motorcycle Security Approval (Gold) and two levels of Motor Scooter security (Gold & Silver). Using a toolkit based on insurance and police information, the motorcycle is proven safe from the average thief. There are a number of options for security at home and also when parked away from home.
Bicycles
Sold Secure has developed a three tier security grading system. The Gold rated locking devices offer the highest level of security. The next level down Silver offers a compromise between security and cost, whilst the Bronze level typically offers defense against the opportunist thief. Thus the purchaser can choose the system which best meets his needs or the relevant insurance requirements. Again there are a number of options for mobile use and some solutions for the home environment. A number of bicycles are stolen from insecure garden sheds or garages and we have tested ground anchors, shackles and security posts to help in this area. Also see our new category for domestic buildings.

Caravans
Recent statistics show that over 5000 caravans are stolen every year and very few are recovered. Indeed according to Home Office resources caravans stolen from the UK have been found as far away as New Zealand! Once again, Sold Secure approves locking systems using the tools that a typical thief would carry. There are three levels of security approval. The Silver level offers basic security, a cost effective product for the occasions when a caravan is stored in a good location. When a higher level of security is required, then the products approved to the Gold standard are available. The Diamond level is the highest of all and offers maximum protection. Ground anchors and security posts are available for fixed security at the caravan’s main storage point.

Tracking units are becoming more and more popular for Caravans and whilst they are a passive system, monitoring location when stolen (rather than an active system preventing theft in the first place) Sold Secure have a test specification for these products.

Ground Anchors
On many occasions, for maximum security, a simple lock is not enough. Unless your bike, motorbike, caravan, boat, trailer or motor mower is fastened down it may be possible to steal it, lock and all! The answer to this is a ground anchor. When installed in your garage, drive or car park, these provide the ideal device for securing your vehicles and other valuable outdoor equipment. Where necessary, use these with a Sold Secure Approved lock.

Security Posts
An ideal way of preventing your vehicle from being stolen from your drive or car park is the security post. These are tested to the normal Sold Secure criteria, making it difficult for the criminal to bypass the security post. They can be effective in securing several vehicles at one time. They can also be used to protect your parking place!

Cars
Crime statistics indicate that the average car thief would wish to spend no longer than 2½ minutes gaining entry to a vehicle and driving off. The Sold Secure attack test acknowledges this criteria and tests the product for a full five minutes. Thus any Car product bearing our seal of approval must improve your chances of finding your car where you left it. Such has been the success of this scheme; car manufacturers now build in security at the production line stage.

Commercial Vehicles
The loss of a commercial vehicle is always made worse by the theft of its contents and the disruption to your business. Sold Secure have approved a range of products designed to protect the vehicle and its cargo.

Annual Audits
As part of the Sold Secure Quality Mark products have to be resubmitted every year for an Annual Audit. The audit is an important part of maintaining the security of the products approved under the various categories, particularly when components are bought in from outside sources by the manufacturers. The Annual Audits can show up to a 25 to 30% failure rate often due to a change in specification from an outside supplier; this can include parts of a product that aren’t hardened properly or made from different materials to the original sample tested at the outset, normally done to try and save cost. This provides an additional benefit to the company getting the testing done of Sold Secure performing what could effectively be described as conformity of production testing for them, an essential item as customers may not have been informed of changes to products they are buying in.
Benefits to Locksmiths & Retailers
The main benefits to locksmiths lie in the ability to sell products that have been approved to standards that are already familiar to and recognised by customers. The Caravan Club has been very active in promoting Sold Secure products and most motorcyclists also recognise the value of an approved product.

Sold Secure; the past, present and future
Whilst Sold Secure may in the past have been a drain on MLA resource (especially cash that has in the past been pumped into the company to keep it afloat), it’s very pleasing to say that this is far from the case with the current Sold Secure. Over the past few years the company has not only paid back all the money owed to the MLA but it has become a profitable self-funding business, with a very healthy cashflow and the ability to invest and of course do things like sponsor MLA Expo 09!

THE FUTURE
One of the big questions is where will security be in 10 years, and what effect will this have on Sold Secure? There has been a noticeable shift away from keys in the vehicle world so will there be the same shift in houses and commercial buildings? There has been a massive rise in access control products, without necessarily the means to test the security of those products. As the domestic market starts to wake up to the benefits of security without the need for a key there needs to be some sort of testing criteria in place to ensure the right sort of products are fitted.

Vehicles are now on about the 3rd or 4th generation of remote locking whereas biometric locks, for example, are still in their infancy. There are stand alone digital, card and biometric locks that sell for very little that may well find their way onto the front doors of houses which could lull homeowners into a false sense of security and it would be useful to have an attack test specification that addresses these products.

So development wise, electronic solutions are increasing in popularity and Sold Secure specifications will continue to be developed with this in mind to enable the company to stay on top of it’s game.

Website (www.soldsecure.com)
Sold Secure’s recently updated website holds a full listing of all Approved Products which is updated instantly a product either achieves approval, or alternatively lapses. This offers a major advantage over many other test houses where lists of approved products have to be created and then uploaded to their website meaning that their lists can be anything up to 3 months out of date. The Sold Secure approved products list has a direct link to a brand new database which means that as soon as the product test file is updated the info will immediately be on the website, effectively providing a “real time” Approved Product list.

The website allows everyone to see whether a product has Approved Product status. Sometimes products are not resubmitted, in which case they may still be displaying the Sold Secure logo on the packaging but no longer be approved. It also means that if someone is selling a product as Sold Secure Approved then you can tell immediately whether this claim is true. The importance of this has been proved recently with one insurer having checked to see if a particular product was approved and when it wasn’t going back to the member of the public to highlight that the relevant discount was not available to him as the product’s approval had lapsed.

On the website there is also a download area where Internet users can download the Sold Secure catalogue, the MLA’s Guidelines for domestic security as well as a glossary of terms.

Information on these approved products is circulated by Sold Secure to crime reduction officers, insurance companies, the media, the Home Office and the public, and is available free to those who request it. The new website also highlights the MLA and suggests that MLA approved companies are used for the supply and fit of approved products. This dove-tails nicely into the fact that some insurance companies stipulate that in certain instances Sold Secure approved products have to be used and fitted by an MLA locksmith. This has netted a number of MLA member’s jobs and goes to show the benefit of Sold Secure to the MLA.
Pragmasis - Manufacturers of Top Quality Security Products:

**Torc Ground Anchor**
- Highest-approved ground anchor on the market (Sold Secure Gold in every category)
- Easy DIY or customer install
- 20mm Hardened Steel Fold-Flat Shackle
- Impossible to bolt-crop!
- Police Preferred Specification

An ASSA ABLOY Group brand
Introduction

Here we ask Sold Secure’s Technical Manager, Justin Freeman, more information about how Sold Secure conduct their testing.

What are Sold Secure specifications?

Sold Secure has its own set of bespoke standards that it uses to test security products in its purpose built test laboratory. There are approximately 40 specifications that are product specific and tailored to known used attack methods and available tools. Sold Secure typically writes standards with three different levels of security. This is usually described as Gold, Silver and Bronze level. (Some specifications only have one level. Such as Gold and some have a new higher security level called Diamond). Each specification is written with its product group in mind so therefore tool lists for specifications differ, so for example SS101 for motorcycles Gold has a much higher level of attack and heavier tools than SS104 for cycles Gold. Some Sold Secure specifications refer heavily to British and European standards and will refer to several per single specification.

How are Sold Secure specifications written?

Sold Secure specifications are not designed to eliminate crime! They are written to provide a set of guidelines that when met ensure that everything reasonably possible was done to prevent a theft. Information provided by stakeholders such as police (ACPO) and insurers tell us how a product is usually stolen and what tools are used to do it. Constant networking with police, insurers, members associations (e.g. The Camping and Caravaning Club, National Caravan council) and manufacturers ensure that if crime patterns change then so do the specifications. A good example of this was the recent re-write of SS104 (bicycles). It was bought to our attention that a previously specialist cable cutting tool was now freely available and at very low cost. Sold Secure lab manager Steve Warren conducted a series of tests looking at different cutters and found a very cost effective set that were far more effective than previous cutters. This tool clearly had to be included in the specification and following advice and input from a group of relevant stakeholders (including ACPO and the pedal cycling organisation CTC) was introduced at the Gold level. You now know that if you buy a product with current Sold Secure bicycle approval then the security product can withstand attack from this tool. Insurers, police and members associations, because of their input can be confident that when they see a current Sold Secure logo everything reasonable has been done to keep that product safe. Police are confident to recommend Sold Secure and insurers will often request Sold Secure when handling new policies or providing requests for security improvements to current customers. This last item has provided work to a number of MLA members as one particular insurer insists on having Sold Secure approved products fitted by MLA member locksmiths. Industry bodies as well as the likes of caravan clubs or cycling organisations will recommend to their members to use Sold Secure and manufacturers will build their products to Sold Secure specifications.

Other recent Sold Secure changes

Sold Secure specifications are written in a similar way to British or European standards but are based more on real
SS 312 specification for cylinders for locks

Recent problems highlighted by ACPO (Association of Chief Police Officers) could see some fairly major changes made to PAS 24 and BS 3621 GVA testing to reflect a certain MO being increasingly used by burglars. Sold Secure have stolen a march on these changes by introducing the Diamond level to their SS 312 test specification.

This level includes EN 1303 testing by a UKAS accredited test house, BS 3621 GVA testing by expert MLA testers and an additional one minute attack test on the cylinder itself. The main thrust of this particular section of the test is to measure the cylinder’s vulnerability to the specific MO of the burglar. While a one minute attack test does not sound like a very hard test, the cylinder is exposed in the test block (as if the handle has been removed) with a 45mm hole around the cylinder (simulating an attack on the doors structure to provide room for attacking the cylinder). Various tools that are used in this MO have been included in the tool list for this particular test to fully replicate the types of attack that are being increasingly reported. To date, one manufacturer has been successful in gaining SS 312 Diamond and Sold Secure is working with others as they develop improvements to their products. This specification will we believe offer the very first third party tested genuine security cylinder that will be recognised as having genuine attack resistance on cylinder only and has already raised interest by ACPO Secured by Design who have confirmed they will accept this test for their certification requirements.

So next time you’re looking to purchase a Euro cylinder, ask if it’s been independently tested. If it hasn’t then ask why not – would it not meet the standard?
Secure?

Ask your MLA licensed locksmith

MASTER LOCKSMITHS ASSOCIATION
THE KEY TO YOUR SECURITY NEEDS

Find your nearest MLA licensed locksmith by contacting the association on 01327 262255 or visiting www.locksmiths.co.uk
The Master Locksmiths Association (MLA) is the leading trade association for the locksmithing industry. A truly not-for-profit organisation promoting the skill and integrity of its approximately 1,400 members, it was established over 50 years ago to set and promote standards of conduct, practice and materials within locksmithing. The MLA is recognised as the authoritative body for locksmithing by the police, home office, British Standards Institute (BSI), The Risk Insight, Strategy and Control Authority -RISCAuthority (formally IPCRes) and Building Research Establishment (BRE).

MLA member companies, who undergo strict vetting (including criminal record checks, regular inspections to ensure quality etc), are able to provide advice based on knowledge and experience, recommend products that are fit for purpose as well as provide professional installation and maintenance services. Details on your nearest MLA approved company can be found on the website www.locksmiths.co.uk.

The MLA, a City & Guilds approved centre, also provides training from its purpose built training facility based at the company headquarters in Daventry, consisting of a classroom type environment for theory work and fully equipped workshop for the hands-on practical elements (N.B. due to the content of some courses they may only be open to MLA members). Courses currently include general locksmithing; opening; access control, safe engineering and Auto Locksmithing, with others currently under development.

Northants NN11 3PZ
Under the guidance of the ACPO portfolio lead for Vehicle Crime matters, DCC David Ainsworth, Wiltshire Police, the ACPO Vehicle Crime Intelligence Service was formed. The unit was officially launched in December 2006 by the Policing Minister Mr Vernon Coaker, supported by Sir Ken Jones QPM the President of ACPO. AVCIS is based within the NPIA complex at Ryton, near Coventry. This provides a central location within the country, proximity to national road networks and adequate office accommodation.

Its overarching aim is:

‘to develop and promulgate a full range of enhanced capabilities, that will enable the police service and partners to incapacitate offenders, who use vehicles in the course of their unlawful activities, across the full spectrum of criminal activity’.

It is recognised that ‘traditional’ vehicle crime, such as theft of or from vehicles is no longer regarded as a policing priority by most forces. However, the use of vehicles in acquisitive crimes, such as burglary, supporting serious and organised crime, and potential links to terrorist offences cannot be overlooked. For that reason the main thrust of AVCIS is to gather intelligence to tackle ‘vehicle enabled crime’.

AVCIS does not exist in isolation. It operates within a complex and dynamic environment where national priorities are changing and high-level strategies require constant interpretation and reinterpretation. AVCIS works with partner agencies and all stakeholders within the trade and associated businesses to provide the most effective response. AVCIS speaks for the UK Policing in respect of vehicle enabled crime matters.’

Mark Hooper, Head of Unit, ACPO Vehicle Crime Intelligence Service

As a result of partnership funding from the Camping and Caravanning industry, including the National Caravan Council, Camping and Caravanning Club and the Caravan Club this unit now has its own Leisure Vehicles Officer, Tim Booth. Having worked for a period supporting the National Caravan Council Tim will now work with this unit in an enhanced role, supporting and training Police Officers, working with manufacturers, dealers and insurers, and researching crime attack methods and safety issues that impact on the consumers use of leisure vehicles.

Sold Secure as a third party testing house has an important role to play in translating intelligence into how these products have be attacked into tests that reflect these attack methods. Tim is the first civilian investigative officer to be a part of this specialist unit. Since joining AVCIS early in 2009 Tim has supported a number of Police operations throughout the UK and caravans valued in excess of £1million have already been identified and recovered.

Working together this partnership have recognised the importance of raising the awareness of the consumer not only to security matters affecting the consumer, but also safety matters that may impact on the consumer’s leisure time experience. Under the banner of the Caravan Safety and Security Group this partnership will continue to work to endeavour to make the leisure industry as safe and secure as possible.

Design and manufacture of high security and safety products for over 150 years.

Installation of the IRONTOWN® alley gates not only reduces crime significantly but also reduces the fear of crime, while research, carried out by Liverpool University’s Environmental Research Unit into alley gates, shows that millions of pounds can be saved in police time, insurance claims and court costs.
Crime figures show a disturbing upward trend in instances of burglary, where force is used to gain entry via a closed or partially opened door.

A new, innovative intruder deterrent now allows householders to use the threat of DNA trace to protect their families and their property against the increasing risk of burglary.

Due to the evidential nature CHAIN REACTION DNA must be installed and the DNA component registered by an approved StranDNA installer or registered member of Master Locksmiths Association.

Feel Safe in Your Home – Keep Intruders At Bay With DNA

Multiple Security Protection

The CHAIN REACTION DNA intruder alarm is professionally installed unobtrusively to the inside of a door and provides extra resistance to burglary and forced entry.

Should your door be forced open, a high decibel alarm sounds, scaring intruders off and alerting neighbours.

The intruder’s clothes and skin are simultaneously sprayed with an invisible UV based DNA trace. Police can screen criminals and StranDNA establish the unique DNA CODE on clothes or skin and track the criminal back to your home providing valuable forensic evidence linking criminal to crime scene.

Warning stickers alert any would-be attacker to the presence of CHAIN REACTION DNA discouraging unlawful attempts at entry.

To find out more about this unique security device visit www.chainreactiondna.com or telephone StranDNA (UK) Limited, on 08442 490150
Tim Booth Consultancy Services

Tim Booth was a Police Officer for 30 yrs with Lincolnshire Police. Through that time he was engaged in most aspects of policing and at the time of his retirement he was the senior crime reduction officer for Lincolnshire Police.

As a crime reduction officer Tim supported the local Crime and Disorder Partnership as the Police / Local Authority Liaison Officer, working with Government Offices to secure funding for local projects.

As a Home Office accredited Crime Reduction Officer Tim extended his qualifications to become an Architectural Liaison Officer, accredited by both the Home Office and the University of Lincolnshire. This resulted in further work with local planning officers to reduce crime and anti-social behaviour.

Seeking to promote the benefits of partnership working between both statutory and non-statutory agencies Tim was also trained as a Home Office ‘Associated Trainer’. Having established the first industry sponsored crime prevention caravan initiative with the then Welland Group of companies the caravan industry recognised the benefit of promoting security to the general public, and Tim, as a long time caravanner began to establish strong links with the caravan industry manufacturers. This sponsorship was formalised in the form of a national agreement, and under the banner of the Home Office leading industry organisations came together to provide an advice facility at leading national shows.

These shows forged strong links between the industry / public and Police and the show facility became a contact point for manufacturers of security equipment and specialist leisure equipment.

Tim’s links with the Home Office extended and he became a member of the Leisure Section of the Vehicle Crime reduction team. Recent figures released by this group show how positive an impact partnership working has had on reducing leisure related crime.

Partnership was the theme when Tim was appointed to the National Caravan Council Security Working Group – a group that has worked to establish new security products for the market, resulting in the re-writing of previous standards that the new products exceeded. Work continues to establish further industry standards for the services provided by the leisure industry and the products that the industry supplies to the public. These are the standards that many specialist leisure vehicle insurers now work to include as requirements in their various policies. They recognise that by ensuring a realistic standard for a security product is met then the consumer will be less likely to become a victim of opportunist crime.

It is these products that manufacturers now submit to Sold Secure for their product certification.

Sold Secure are able to test these products against a simulated attack by criminals and only products that meet their attack test criteria will be certificated as Sold Secure Approved.

Tim continues to work as specialist advisor to the National Caravan Council, and as an extension of the Leisure Vehicle security work portfolio in 2009 Tim joined AVCIS (ACPO Vehicle Crime Intelligence Service) as their Leisure Vehicles Officer (see page xx).

www.timboothesl.co.uk
www.avcis.org
The Caravan Club is the Europe’s premier touring organisation representing a million individual caravanners, motor caravanners and trailer tent owners. It operates the largest privately-owned network of quality sites in the UK, and offers members a fantastic choice of 3,000 Caravan Club-badged locations – including large Club sites and over 2,500, small maximum 5-pitch Certificated Locations (or CLs) on farms, country estates and beside rural inns.

The Club has always been at the forefront in promoting and supporting initiatives which protect its members’ interests or assets – including making caravanning safer – and has therefore been involved in the development of the Sold Secure approval scheme from the outset.

One of the key benefits available to Caravan Club members is access to expert practical and technical advice. The Club has researched and prepared a wide range of information leaflets, available as downloads from the website at www.caravanclub.co.uk, to answer many questions asked by members – whether first-timers, or seasoned caravanners!

As far as caravan security is concerned, The Club has chosen to make members aware of only those products bearing the Sold Secure mark of approval. These products are detailed in the ‘Caravan Security’ leaflet (showing the standard achieved by that item), along with advice on ways to avoid vehicle theft as far as possible. It also provides advice on how to maximise the chances of having stolen property recovered should the worst happen by, for example, registering with The Caravan Club’s Theftcheck scheme, security marking the serial or chassis number is several places inside the caravan and ensuring CRiS (Caravan Registration and Identification Scheme) details are up to date.

The Caravan Club was a founder member of the Caravan Safety and Security Group (CSSG). The formation of the CSSG was the culmination of over two decades of involvement by The Club to advising and assisting its members in this important area of concern.

In the mid-80s The Club set up a group known as CITARG (Caravan Insurers Theft and Accident Research Group) and subsequently became involved as an active member of the government-backed Leisure Sector Vehicle Crime Reduction Action Team (LSVCRAT) in 1999. LSVCRAT worked very closely with the Home Office and was able to reduce the incidence of caravan theft between 2000 and 2008.

Changes at the Home office in 2008 resulted in the demise of the LSVCRAT, but its constituent organisations were very keen to continue the work that had been so effective. At the same time it was decided to extend the remit of the group to include matters of safety, and so the Caravan Safety and Security Group, in conjunction with AVCIS (Association of Police Officers Vehicle Crime Intelligence Service), was formed.

“It’s important that we have influence and represent members at the highest possible level,” explained Lesley Coell, The Caravan Club’s Head of Insurance and Financial Services. “The formation of the CSSG following the demise of LSVCRAT, with its close association with ACPO and AVCIS, gave The Club the perfect opportunity to continue this extremely effective work. We are keen to maintain our leading position in this key area for the benefit of our members and our commitment to the Sold Secure scheme is part and parcel of this ambition”.

For further information about The Caravan Club see www.caravanclub.co.uk, or telephone 01342 326944.
The Tracking And Monitoring Providers Association (TAMPA), formerly known as the Tracking Industry Association, was formed to represent telematic’s (GPS), RF and GSM Tracking businesses and its subsequent liaison with law enforcement and other relevant organisations, the intention being (amongst others) to:

- gain insight into the kinds of products currently populating the tracking market and,
- to provide an information service for those wishing to know about such products
- to provide professional input to the newly formed Caravan Security and Safety Group
- to use Sold Secure as a benchmark for assessing tracking products and companies
- (ultimately) to create a database of tracked vehicles and assets available to those with the necessary permission to access it.

This database is not intended to compete with the Thatcham list of Category 5 accredited systems (or TELAS) but more to supplement it. It will serve to represent companies offering tracking systems for powered and non-powered assets used mainly in, but not restricted to, the leisure, plant and agricultural machinery markets.

With the greater availability and accuracy of positioning and location technologies, an increasing number of companies have been entering the stolen vehicle tracking market. Many products marketed as fleet management and driver information systems have also the potential to be used to locate and recover stolen vehicles. However, one problem that may occur is that, as such, they may not have anti-theft features designed in because that is not what they were designed for. Other complications may arise as the System Operating Centre (SOC) or Monitoring Bureau may not be located within the United Kingdom.

Vehicle tracking systems are also referred to as After Theft Systems for Vehicle Recovery (ATSVR) under European Standards. The terms cover a range of products, which by use of communications technology, or a combination of technologies, can identify a stolen vehicle and its realtime location and present this information to a SOC or to the police, or both. It is recognised that such systems may provide a capabilities within fleet management or logistics systems or part of services known as vehicle telematics.

The Association of Chief Police Officers Property Tracking Group (ACPO PTG) negotiates on behalf of the police service with companies operating stolen vehicle tracking and location systems to achieve common procedures with UK police forces and contribute to the work of any appropriate technical standards organisation.

The companies operating tracking or locating systems should not make unrealistic representations to their customers as to the level of police response to a system activation.

The level of police response to a suspected crime is an operational matter subject to many factors, including the discretion of Chief Officers, competing operational commitments and the quality and reliability of information.

The tracking/ location company must give evidence that the installation of their equipment to customer vehicles will be of a standard that prevents false activations.

Any Systems Operating Centre (SOC) used in tracking or location systems should comply with BS 5750 / ISO 9000 on quality assurance. It is for the consumer to ensure that the security of the SOC is proportionate to the risk and that it:

- Operate 24 hours a day, 365 days a year
- Provide full backup monitoring systems in the event of down time
- Have a full disaster recovery plan to enable continuation of service within 15 minutes.
- Adhere to the data protection laws of the country in whose jurisdiction they operate

Sold Secure Approved Products Catalogue 2011
Secured by Design
– the UK police initiative for designing out crime

Secured by Design (SBD) is owned by the Association of Chief Police Officers and focuses on the design and security for new & refurbished homes, commercial premises and car parks.

The project, which also covers the accreditation of security products and crime prevention projects, supports the Home Office aim of reducing crime and fear of crime and one of the Government’s key planning objectives: the creation of secure, quality places where people wish to live and work.

Over the last 20 years, the scheme has worked closely with key industry bodies and has helped set new standards for improving security in and around homes and designing crime out of the community with proven results: research shows that residents living on Secured by Design developments benefit from up to 75% reduction in burglary and are two and a half times less likely to suffer vehicle crime.

The SBD’s membership scheme, which includes crime prevention and security products that have passed the minimum security standards specified by SBD, currently includes over 400 member companies whose products have been awarded the ‘Police Preferred Specification’ status.

The increasing numbers of SBD members reflect the success companies have had with SBD accredited products in their range and the growing importance that is placed in third party certification as a means of demonstrating the quality and resilience of security products as well as guaranteeing successful service delivery.

SBD promote the use of Third Party independent testing and accreditation of products and recognise Sold Secure as an important provider of these services for security products. By supporting the company with the updating and development of test specifications, SBD helps Sold Secure to ensure that test methods reflect true MO’s being used out in the field.

ACKNOWLEDGEMENTS
The Master Locksmiths Association is grateful to the following organisations for their support and assistance in drawing up these guidelines:

- British Hardware Federation
- Builders’ Merchants Federation (BMF)
- Chief Fire Officers Association (CFOA)
- Door and Hardware Federation (incorporating Door and Shutter Manufacturer’s Association and Association of Building Hardware Manufacturers).
- Glass and Glazing Federation (GGF)
- Guild of Architectural Ironmongers (GAI)
- Home Office Scientific Development Branch (HOSDB)
- RISC Authority (UK insurers technical advice body)
- Lloyds
- Sold Secure (part of MLA Group)

Note: These Guidelines give a general description of security for domestic buildings. Neither the guidelines nor the list guarantees that these methods are suitable for specific applications. It is the responsibility of the equipment supplier and/or equipment purchaser to ensure that any system is suitable for its particular application and that it complies with all legislation, standards, codes of practice or any other requirement.

Every effort has been made to ensure the contents of these Guidelines are accurate, however the Master Locksmiths Association does not accept any responsibility for loss arising from decisions based upon them.

1. INTRODUCTION
Theft from domestic property causes major problems for the Insurance industry and for specifiers of security products who might not be familiar with the industries involved. The reasons for these guidelines are:

- the Insurers possible requirement on a policy holder to maintain a minimum level of security to protect their premises, to use it when the premises are unattended or in part when they are occupied.
- the general obligation of householders to take reasonable security precautions for their own good.
- to provide easily understood information for the use of those not familiar with the Security or Insurance industries.

These guidelines are not intended to be applied to new construction or major refurbishment. For these applications British Standards BS 7950:1997 with Amendment 3, Specification for enhanced security performance of casement and tilt/tum windows for domestic applications and PAS 24:2007+A1:2009 Enhanced security performance requirements for door assemblies, Single leaf, external door assemblies to dwellings apply. These specifications are based on complete doorsets and window assemblies i.e. the door or window, including frame, hinges, locks, and fixings as a whole unit. The specifier is recommended to obtain doors and windows certified to these specifications. Further guidance is given in BS 8220-1: Guide for security of buildings against crime – Part 1:2000 -Dwellings.

Currently European specifications EN 1627-1630 also exists for the security of doors, windows and shutters. Products certified to the appropriate grades of these specifications are equally suitable.

These Guidelines assume that occupants are all able bodied. For users with disabilities, seek professional guidance before any installation.
Every attempt is made in these guidelines to be as practical as possible with recommendation or the specification of products, but there will always be occasions where alternatives will need to be sought because of the nature of a particular design, size or other feature of a door or window to be secured. In these circumstances the advice of a specialist in this field should be sought. Advice on occasions be necessary. Often, due to the nature of the door or window construction, or the material from which it is constructed, it is not possible to test locks to the exacting standards set out in BS EN 1303:2005. Clause 6.8 Key related security Grade 5 (Table 9) and Clause 6.9 Attack resistance Grade 2 (Table 10)

Where any cylinder operated lock is used, the outside cylinder shall not protrude more than 3 mm from the face of the door or the lock furniture (handle plate or cylinder rose) where fitted. Lock furniture should be of the ‘bolt through’ type with the fixings being secured from the internal side only. Lock furniture should comply with BS EN 1906 Lever handles and knob furniture – Requirements and test methods – Annex A: Requirements for security lock furniture for use on burglary resistant doors – Grade 1 unless certified as a component of a door assembly satisfactorily tested to PAS 24. Lock furniture may consist of separate components of lever/knob handles on roses and cylinder roses or composite backplates. Where cylinder roses are fitted, these must provide the cylinder protection as required under BS 3621, BS 8621 or BS 10621.

3. MINIMUM SECURITY REQUIREMENTS

(a) Locks currently available certified to British Standard BS 3621, BS 8621 or BS 10621 should bear the standard number and the mark of the certification agency. These are listed in the web links in Appendix C. Such locks may be available in rim or mortice fixing. Locks for PVC-U and composite doors (when multi-point) should meet the minimum requirement set out in BS 3621, PAS 8621 and PAS 10621 published in 2010. Locks produced prior to this date should have a minimum of three locking points and use a cylinder that meets the minimum requirement stated in 3(b).

(b) Lock cylinders installed before the implementation of these guidelines (November 1999) should have a minimum of five pins and an anti-drill insert. Thereafter, as a minimum requirement the cylinder shall meet the requirements of BS EN 1303:1998 Clause 6.7 Security Grade 4 (Table 10) or BS EN 1303:2005. Clause 6.8 Key related security Grade 5 (Table 9) and Clause 6.9 Attack resistance Grade 2 (Table 10).

(c) Nothing in this document or related documents shall imply that the installation of any security device will prevent unauthorised entry to a premises or that by following these guidelines insurers are obliged to issue insurance cover.

2. GENERAL CONSIDERATIONS

When considering the matter of minimum security requirements and the interpretation of these guidelines, users of these guidelines should be mindful of a number of factors:

(a) The adequacy of the door or window, frame thickness and the material quality together with the fixings of the frames to the surrounding structure might impact on the level of security provided.

(b) A degree of flexibility when imposing security requirements might, on occasions be necessary. Often, due to the nature of the door or window construction, or the material from which it is constructed, it might require the use of locks or locking devices in situations other than that for which they were intended. In such circumstances the advice of a Trade member of the Master Locksmiths Association should be sought, and written confirmation of their proposals obtained from any interested insurer.

(c) If improvements are required to the security of aluminium, PVC-U or composite material doors or windows it is stressed that this work should be undertaken by professional. Advice should be sought from an Approved Company Member of the Master Locksmiths Association who has experience in this type of work. Care should be taken not to breach manufacturers’ warranties that might still apply.

(d) It must also be appreciated that some locks not certified to BS 3621 have in the past and could in the future be accepted by Insurers. Where this is the case, written confirmation by the Insurers of their acceptance of the product for its intended use should be obtained by the end-user. This recommendation also applies with the introduction of lock assemblies under BS 8621 and BS 10621.
(d) A limited range of other door locks, and most types of lockable bolt or window locks, are likely to be acceptable to insurers for the purpose of securing doors and windows. A proposed (to be issued in 2010) guidance document on Minimum Security Standards for Domestic Properties will provide full details. This will be available for download from www.riscauthority.co.uk

4. HINGED DOOR SECURITY

The type of lock and the position to which it is fitted on the door is dictated by the design of the door. It is therefore not possible to make specific recommendations regarding the fixing positions of additional security devices, as this will be determined by the position of the original fittings on the door. The height at which the lock is fitted might also be determined by the level at which the user is standing when locking or unlocking the door, e.g. one or two steps below the door entry level.

For specific guidance reference should be made to BS 8220 Guide for security of buildings against crime – Part 1:200 Dwellings. However, the following is offered as a general guide:

4.1 Additional Mortice Deadlocks

Where the lock to be fitted is of the mortice type, the minimum thickness of the door to which it is being fitted must be 44 mm. The lock should be fitted approximately midway between the existing lock and the top or bottom of the door depending on which has the greatest unsecured distance, avoiding any cross rail or glazing bar joints.

4.2 Additional Mortice or Rim Security Bolts (Single Doors)

To be fitted horizontally (where possible) approximately midway between the top lock and the top of the door and the bottom lock and the bottom of the door. Where a single lock conforming to the requirements of the insurance company is fitted, the additional bolts should be fitted approximately midway between it and the top and the bottom of the door.

Where bolts are fitted vertically they should be between 50 mm and 100 mm from the edge of the door, avoiding any joints. For greater security on emergency or final exit doors, mortice bolts, preferably knob operated for fire safety reasons, are recommended in preference to surface mounted bolts. Where doors do not form part of an escape route, loose key mortice bolts are suitable.

4.3 Additional Mortice or Rim Security Bolts (Double Doors)

To be fitted vertically to the top and bottom of the doors between 50 mm and 100 mm from the front of the rebate edge of the door, avoiding any joints. It could be necessary to fit security bolts to the top and bottom of the first closing leaf only, if the doors are of substantial construction. For greater security on emergency or final exit doors, mortice bolts, preferably knob operated for fire safety reasons, are recommended in preference to surface mounted bolts on the first opening leaf, the first closing leaf being secured by loose key bolts. Where doors do not form part of an escape route loose key mortice bolts are suitable for both leaves.

4.4 Hinge Bolts and Security Hinges

Hinge bolts shall be fitted to all outward opening doors at a position of approximately a quarter of the door height from the top and bottom of the door, but not within 150 mm of the top or bottom hinges. Hinges for use on burglar-resistant doors should comply with BS EN 1935:2002 Annex C. These may comprise either such a design that the hinge pin can only be removed when the door is open, or alternatively, suitable composite security hinges incorporating hinge bolts within the hinge flap that enable the hinge to withstand shear loads should be considered.

4.5 Letter plates

Letter plates should be located with the aperture at least 400 mm away from any locks to stop access to the locking system through the pervert. The letter plate aperture should be in accordance with the requirements of BS EN 13724: Postal services-Apertures of private letter boxes and letter plates – Requirements and test methods. Type 4 size 2 230 – 280 mm wide x 30 – 40 mm high. If these criteria cannot be achieved, additional measures might be needed to prevent access to door locks through the letter plate, such as the addition of internal security flaps or letter cages/internal postal boxes. Letter plates should be fitted horizontally at a height between 700 mm and 1700 mm measured from delivery floor level.

Where the sole means of internally locking a door is hand (not key) operated, then it is recommended that the letter plate be omitted from the door. In this instance, alternative means for mail delivery shall be provided such as an external postal box complying with types 1, 2 or 3 of BS EN 13724:2002, in which case the aperture size will vary according to the dimensions of the postal box.

4.6 Stable Doors

Both halves of stable doors must be treated as separate doors.

5. WINDOW LOCKS

Where windows are not required to be opened, they may be screwed permanently shut. Security screws shall be used where this is to be done from the outside, and the heads countersunk and plugged.

The security of all ground floor and all accessible windows which are not considered as means of escape (e.g. from a flat roof) shall be considered. Openable windows that are over 600 mm high or wide should be fitted with a multi-point locking system or two window locks with removable keys. Sashes less than 600 mm need only be fitted with a single lock.

Where a lock is to be fitted to a window care must be taken to ensure that the material to which the lock is fitted does not become weakened by fitting it too close to existing fittings.

Where a window is required for emergency egress then it shall not be fitted with any type of key lockable system. In this instance the window should be fitted with laminated glass.

5.1 Louvre windows

Urgent consideration should be given to replacing louvre windows as it is difficult to achieve adequate security. If this is not possible, then all panes of glass (in louvre windows) should be securely fixed, with suitable adhesive, into their brackets or suitable grilles, bars, or shutters fitted. Louvre windows should not be installed in vulnerable locations. The use of plastic frame materials is not acceptable for a security application.

5.2 Casement Windows

Where the casement window opening exceeds 600 mm, two locks are required. For side-hung casements windows over 600 mm high the additional locks should be fitted approximately quarter of the height from the top and bottom of the casement window. For top or bottom-hung fanlights in excess of 600 mm wide, the locks should be fitted approximately one quarter of the width of the opening fanlight from either side of the sash.

5.3 Tilt/Turn Windows

Additional locks should be fitted to the bottom rail at the leading edge for security and also to prevent the accidental opening of the window in the side hung mode.

5.4 Vertical Sliding Sash Windows

Where the window opening exceeds 600 mm, the locks should be fitted on the meeting rail of the bottom sash, at approximately one quarter of the width, or on the vertical frame either side of the upper sash, directly above the meeting rail of the bottom sash.

Where there is a requirement for ventilation when the premises are occupied, vertical sliding sash windows can be provided with restricting devices suitably placed to provide a ventilation position, to allow them to be opened a maximum of 100 mm and remain secure. This is not recommended when the premises are unoccupied. The window should then be secured in the fully closed position.

6. SLIDING DOORS AND WINDOWS

All sliding doors and windows should be fitted with anti-lift devices to prevent them being removed from their tracks. Care should be taken to ensure such devices are fitted appropriately so that they do not to go inside the section of the frame when the door/window is closed. Some sliding door locks have an in-built facility to prevent the door being lifted, e.g. swing hook bolts which rotate upwards to engage. Additional locks fitted to sliding doors and windows should be fitted in such a manner as to ensure any force applied to open the door acts against the lock fixing screws.

Wherever possible, additional locks should be fitted to the top and bottom of the interlock of sliding doors and windows. However, there are some

Sold Secure Approved Products Catalogue 2011
designs, which make this impractical. Sliding doors/windows should not be secured in the ventilation position when the premises are unoccupied.

7. UP-AND-OVER DOORS
Work on improving the security of up-and-over doors should be undertaken by professionals who have experience in this type of work. There are security locking products available for this type of door and the advice of a professional (MLA Trade Member) should be obtained prior to commencing improvements.

8. FRAME FIXING
It could be necessary in some instances to improve the strength of the fixings holding door or window frames to the fabric of the building. Due to the presence of pre-cast concrete, steel lintels or other construction details, it might not be possible to achieve the desired additional fixings to the head or sill of the frame. The type of fixings used will be determined by the material to be fixed and the material to which it is to be fixed, however frame-fixing screws and bolts are available for this purpose.

The following dimensions for the positions of additional fixings are offered as a guide.

8.1 Corner Fixings
Additional fixings made between 150 mm and 250 mm vertically and horizontally from the internal corners of the frame to be fixed.

8.2 Vertical and Horizontal Fixings
Additional fixings made at approximately 600 mm centres between the corner fixings of the frame to be fixed. For greater detail of improved fixings, reference should be made to BS 8213: Part 4:1990 Windows, doors and roof lights – Code of practice for the installation of replacement windows and doorsets in dwellings.

9. GLASS AND GLAZING
As far as security is concerned the main consideration is the ease with which glass can be broken to provide access to window or door hardware. The glazing specification chosen should meet the design and performance requirements of BS 6262:1992 Part 4 Glazing in buildings – Safety related to human impact. For those installations where a higher degree of “security” is needed the glazing should be in accordance with BS 5357 Code of practice for installation of security glazing. There are three main types of glass. These are:

9.1 Annealed glass
Annealed glass consists of, float, sheet, cast (patterns) and wired glass. It breaks easily and when broken forms large sharp fragments. While wired glass can be fractured, it will act as a barrier but only until the wire mesh in the glass is sheared.

The application of an appropriate plastics film can increase the resistance of annealed glass to penetration

9.2 Toughened glass
Toughened glass, (tempered glass), is an annealed glass, except wired glass, that has been subjected to a heating and rapid cooling process that imparts a greater strength to the material. It is resistant to impact by blunt objects but can be fractured by penetration of the surface compressive layer. When fractured, the glass will not act as a barrier. In buildings it is usually found in ‘risk areas’ which include doors and adjacent windows, low windows, bathrooms, landings etc. Typically toughened glass is around eight times stronger than annealed glass but when it breaks it forms a multitude of small fragments. It is also vulnerable to breakage with a sharp point such as a centre punch.

Due to the method in which it breaks, toughened glass offers very little security. Its value is as a safety glass.

9.3 Laminated glass
Laminated glass consists of two or more layers of annealed glass bonded together by means of transparent plastic (poly vinyl butrate -PVB) interlayers. When the glass is attacked the glass layers fracture but remain in place, held by the PVB interlayer. Thus laminated glass offers both increased security and safety over annealed glass. Typical laminated glass found in domestic buildings consists of two layers of glass and one interlayer to a total thickness of 6.4 mm (soon to increase to 6.8 mm).

However, the number of glass layers and interlayers can be increased to provide enhanced security such that, eventually, bullet-proof glass can be produced.

The most common failure mechanism of laminated glass is for it to ‘balloon’ and fall out of the frame under repeated impacts. However, the time taken for this gives an enhanced level of security over other types of glass.

9.4 Double glazing
Double glazing can be in the form of:

1. insulating glass units i.e. two or more panes of glass hermetically sealed at their perimeter. These provide the intruder with two or more panes to break.
2. double windows i.e. two separate single glazed windows in the same opening. These assemblies provide a similar deterrent but only if the inner window is secured.

9.5 Plastics glazing material
Plastics glazing sheet material consists of either a single sheet or combination of sheets laminated together. The performance of these materials is dependent on the polymer type, thickness, and support condition. The advice of the manufacturer should be sought in respect of their security and fire resistance performance, as appropriate.

9.6 Glazing
All glass or plastics glazing sheet material should be secured to the window or door structure in such a manner that it cannot be easily removed from the outside.

10. GLOSSARY
Anti-lift device. Device which prevents a door or window from being lifted in its aperture, where this lifting would decrease the effectiveness of a lock or enable the door/window to be removed.
Barrel bolt. Surface mounted fastener with a sliding part that is usually manually controlled and that secures a movable component to its frame or opening. The shoot is provided with a knob, loose key or similar for operation by hand.
Bolt (1). Moveable part of a lock or latch that usually engages a component fixed to a frame and is withdrawn into the case.
Bolt (2). Fastener with a sliding part that is usually manually controlled and that secures a movable component to its frame or opening, the sliding part being provided with a knob, loose key or similar for operation. It may be surface mounted, or morticed.
Certified. A product subjected to a testing and ongoing audit programme by a MLA approved organisation.
Deadlock. Lock that contains only a deadbolt.
Escape lock. Deadlock that can be opened (even when locked) from the inside by a single action without use of a key.
Escutcheon. Surround with a shaped hole, with or without a pivoted cover plate, primarily to protect the door leaf from abrasion damage caused by key insertion. This could be for decorative purposes or to increase the security of the locking device.
Flush bolt. Recessed (flush) fastener with a sliding part that is usually manually controlled and that secures a movable component to its frame or opening, the moving part being provided with a lever, slide bar or knob.
Hasp and staple. Two-piece fastening for doors which can be secured by a padlock. The hasp could be attached to a fixed or swivel bar.
Hinge bolt. Fixed projection on the hinge side of the door or window. The projection engages into a keep when the door or window is closed. Also known as dog bolt.
Latch. Self engaging device, usually operable from both sides, which holds a door or window in the closed position and is released by hand without the use of a key.
Lock. Fastener that combines within one case a latch operated by a handle and a deadbolt which secures the door or window in the closed position.
Mortice lock/bolt. Lock/bolt where its body is fitted in a mortice cut into the closing edge of the door or window.
Multi-point lock. Lock that has a latch bolt and a number of other bolts positioned remote from the lock case but connected by rods, which are thrown by means of a single action.
Night latch. Latch with a single bevel latch bolt that is operated internally by a knob and externally by a key which automatically engages when the door is shut.

Night vent or ventilation position. Position in which the door or window can be secured whilst slightly ajar. This usually offers only limited security.

Padbar A device spanning the full width of the door opening with supporting brackets or staples fixed to the frame and secured by a padlock

Padbolt/padlock bolt. Door bolt which can be secured in the locked position by means of a padlock.

Rim lock/bolt. Lock/bolt for fixing on the face of a door or window. Security bolt. Mortice or barrel bolt which can only be withdrawn by the use of a key.

Security screw. Screw designed so that it either cannot be removed when fixed or which requires a restricted access tool to remove it.

Strike plate. Flat metal plate, appropriate to the latch or lock, fixed to a frame to engage a bolt(s).

Throw -bolts with linear movement. Distance that the dead bolt travels from the fore end of the lock in an outward direction under the action of force.

Throw -hook bolts with arctuate movement. Distance from the tip of hook bolts with arctuate movement.

11. STANDARDS

The following standards are referred to in the text. The latest version of the standard shall be used.

BS 3621 Thief resistant lock assemblies – Key egress.

BS 5357 Code of practice for installation of security glazing.

BS 5544 Specification for anti-bandiit glazing (glazing resistant to manual attack).

BS 6206 Specification for impact performance requirements for flat safety glass and safetyplastics for use in buildings.

BS 6262 Part 4 Glazing in buildings – Safety related to human impact.

BS 7950 Specification for enhanced security performance of casement and tilt/tum windows for domestic applications.

BS 8621 Thief resistant lock assemblies – Keyless egress.

BS 10621 Thief resistant lock assemblies – Dual mode.

PAS 3621 Multi point locking assemblies – keyed egress.

PAS 8621 Multi point locking assemblies – keyless egress.

PAS 10621 Multi point locking assemblies – dual mode.

BS EN 1303 Building hardware – Cylinders for locks.

BS EN 1906 Building hardware – Lever handles and knob furniture.

BS EN 1935 Building hardware-Single-axis hinges.

BS EN 12320 Building hardware -Padlocks and padlock fittings.

BS EN 13724 Postal services – Apertures of private letter plates.

pr EN 1627-1630 Windows, doors, shutters -Burglar resistance.

SS312 Sold Secure Specification for lock cylinders

APPENDIX A Specification of acceptable hardware

A) All doors: Hinge bolts or security hinges with protection from hinge pin removal on all outward opening doors.

B) All doors: A lock certified to BS 3621, BS 8621 and BS 10621 together with its approved striking or box plate and accessories as tested.

C) All doors: An acceptable alternative lock with the lock manufacturers approved striking or box plate and accessories as approved by the Insurers.

D) Single door A multi-point lock system with a minimum of three horizontal locking points with Pedestrian a central bolt (minimum throw 13 mm) and two dead or hook bolts garage (minimum throw 20 mm). All locked simultaneously by one operation of the doors key. Alternatively a multi-point lock certified to Sold Secure specification SS 306.

E) Sliding: Anti-lift devices

F) Sliding: Main locking system plus key operated patio door lock or security bolts (minimum throw 9 mm) at the interlock at the bottom of the door and if practical at the top of the door. Alternatively a patio bar.

G) Sliding: A hook lock certified to BS 3621 or BS 8621 together with its approved striking plate and accessories as tested

H) Sliding: A multi-point lock system with a minimum of three horizontal locking points Incorporating hook bolts (minimum throw 20 mm) and vertical shoot bolts (minimum throw 14 mm) locking into the head and sill of the door frame. All locked simultaneously by one operation of the key. Alternatively a multi-point lock certified to Sold Secure specification SS 306

J) Double doors: The main locking system plus 2 key-operated rim or mortice security bolts 2nd closing leaf (minimum throw 14 mm) (casement doors)

L) Double doors: Two key operated rim or mortice security bolts (minimum throw 14 mm) 1st closing leaf (casement doors)

M Double doors: Two flush bolts (minimum throw 14 mm) mounted on door edge and 1st closing leaf concealed when doors are closed

N) Double doors: A multi-point lock system with a minimum of three locking points with a central 2nd closing leaf bolt (minimum throw 13 mm) and two dead or hook bolts locking into the head and sill of the door frame (minimum throw 14 mm). All locked simultaneously by one operation of the key. Or a multi-point lock certified to Sold Secure specification SS 306

P) Windows: A window lock with removable key

Q) Windows: A substantial locking handle with removable key

S) Windows: A multi-point locking system with removable key

T) Doors: A door-set certified to PAS 24 or ENV 1627 class 2

U) Windows: A window certified to BS 7950 or ENV 1627 class 2 V) Doors to A heavy duty padbar bolted to the door and frame and fitted with a padbolt oulbuidlings and fittings certified to EN 12230

Grade 3

APPENDIX B Hardware required to be fitted (as listed in Appendix A)

Hinged final exit door A plus B, C or D, or T

Other single hinged external doors A plus B, C or D, plus L (2 off), or T

Pedestrian doors on garages and domestic A plus B, C, D or V, or T

outbuildings

Double doors (1st closing door) A plus L (2 off) or M (2 off)

Double doors (2nd closing door) A plus B, J or N

Sliding doors E plus F, C, G, or H

Louvre Windows See text

Accessible windows and ground floor (But not emergency egress windows) L, P, Q, S or U openings

A sash less than 600 mm in width or height requires a minimum of one locking point. For all other sashes a minimum of two locking points is required

The Rottner group with its headquarter in Austria is celebrating its 40th anniversary in 2011. Rottner Security UK Ltd is celebrating 5 years existence.

The Rottner group today belongs to Europe’s biggest companies dealing with safes, letterboxes, gun cabinets, key cabinets, cashboxes...

Rottner is represented by subsidiaries in 7 countries and distribution partners in a further 3 countries. Altogether Rottner delivers to over 30 countries in Europe and the Middle East.

Over 10,000 customers, among them popular DIY and cash & carry stores, more than 4000 products; this is impressive data.

We are experts in special solutions for banks, car centers, petrol stations, law firms, jewellers and others. We are partner of a lot of those notable branches all over Europe.

The English subsidiary, Rottner Sec. UK Ltd has also contributed to the success of the whole company.

We can be very proud of these figures which would not be possible without the loyalty of our customers. We would like to thank you for this.

However the anniversary should be seen as a chance to again improve the benefits and the service to the customers.

We therefore decided to put the management of this company under the control of the headquarters in Austria. The new sales director is Thomas Halbertschlager, who as a member of the management within the whole Rottner group is also in charge of the logistics and administration. It is therefore guaranteed that decisions can be made quickly, changes in the market can be reacted to immediately and the experiences from other countries can be instantly implemented in the UK.

The first changes can already be seen: In West Bromwich a warehouse with more than 200 different products was established. M&L Logistics support Rottner here outstandingly. In addition City-Link has become a new partner for parcel delivery so that next day delivery can also be offered. Fixing and positioning rounds off the new service for customers.

However the former location of the company in Bedford remains.

At the location of our warehouse in West Bromwich we are also opening a representative showroom. Since 2011 we have a training centre here, where our customers can take part in regular product and sales training courses. An interesting social programme completes the day comfortably.

The new main catalogue, which is now released, is then also shown on our website in a few days.

In 2011 we will also be seen at the MLA EXPO 2011 with a representative stand and we hope to be able to welcome you there.

There will therefore be a lot of new things happening in our company this year. It will be an exciting and busy year.

We are looking forward to the success of working together with you.

Your Rottner Team

You want to get the new catalogue? Send a mail to info@rottner-security.co.uk

You want to hear more of the advantages of dealing with Rottner? Call 01234/376767

We will develop special solutions for your success
MLA Expo 11

The dedicated locksmithing and physical security exhibition in the UK.

MLA Expo 11 is sponsored by TradeLocks

Professional equipment for professional locksmiths
Licensing the Professional Locksmith

The Master Locksmiths Association (MLA) is the leading Trade Association for the locksmithing industry.

In the absence of Government based licensing (meaning that anyone can call themselves a locksmith), the MLA can provide you with peace of mind through it’s licensing scheme.

MLA licensed locksmith companies, who undergo strict vetting (including criminal record checks, regular inspections to ensure quality etc), are able to provide advice based on knowledge and experience, recommend products that are fit for purpose as well as provide professional installation and maintenance services.

The key to your security needs.

Find your nearest MLA approved locksmith by contacting the Association:

Tel: 0800 783 1498 · Fax: 01327 262539
Web: www.locksmiths.co.uk
E-mail: enquiries@locksmiths.co.uk
The benefits of using an MLA licensed locksmith

- Leading Trade Association for the locksmithing industry
- Not-for-profit organisation
- Established over 50 years ago
- Nationwide Membership
- Promotes standards of conduct, practice and materials within locksmithing
- Provides peace of mind to the end customer through its licensing scheme, in the absence of Government based licensing
- Following a change to the law on the vetting of locksmiths implemented thanks to a campaign by the MLA, the only way for locksmiths to get standard Criminal Record disclosures is via Master Locksmiths Association membership
- Various discounts available from participating MLA members (see website homepage for more information)
- Standards are kept high by employment of qualified locksmiths, strict vetting and regular inspections. Training is also provided by the Association to ensure members are constantly up to date with the latest industry developments
- Recognised as the authoritative body for locksmithing by:
  - Police
  - Home Office
  - British Standards Institute (BSI)
  - RISC Authority (formerly IPC Res, the UK property insurers’ technical group)
  - Building Research Establishment (BRE)
- MLA licensed locksmith companies are able to provide:
  - Advice based on knowledge and experience
  - Recommend products that are fit for purpose
  - Provide professional installation and maintenance services
  - A pricing policy to ensure fair and transparent prices are quoted before work commences
- Channels of arbitration exist to fully investigate any complaints or disputes, should they arise, and the MLA advises or takes any necessary action depending on the outcome
- Look out for the MLA Approved Company Logo

Visit www.locksmiths.co.uk or call 0800 783 1498 to find out the details of your nearest MLA licensed locksmith.

Sold Secure, one of the leading suppliers of test and certification services for security related products, is delighted to sponsor this leaflet. Working with companies world-wide, we assess products to see whether strict performance criteria are met and where applicable allow the use of the coveted Sold Secure approved logo. When choosing your security products be sure to ask your MLA licensed locksmith if there is a Sold Secure approved product suitable for your particular needs.
Sold Secure provides test and assessment services of effective security products to commercial customers, the insurance industry, the Home Office, the Police and the public.

Sold Secure is a company dedicated to reducing the risk of theft by the assessment of security products. Established in 1992 by Northumbria and Essex Police with the help and backing of the Home Office, it is now administered by the Master Locksmiths Association.

The scheme has close ties with a number of constabularies and insurers who provide regular information regarding the methods of theft and the tools utilised by criminals in their area. This helps to maintain an up to date specification and means security products can be assessed in the light of the risk they are likely to encounter when in use.

Manufacturers and suppliers can apply to have their products approved by Sold Secure. Products which have been satisfactorily assessed may bear the Sold Secure Quality Mark. Information on these approved products is circulated by Sold Secure to crime reduction officers, insurance companies, the media, the Home Office and the public, and is available free to those who request it.

The Approved Product list gives the reader an insight into the more effective security products, it does not give any form of guarantee that these products will be 100% effective in combating crime. Also, it does not guarantee that these methods are suitable for specific applications. It is the responsibility of the equipment supplier and equipment purchaser to ensure that any system is suitable to its particular application and that it complies with all legislation, standards, codes of practice or any other requirement. Every effort has been made to ensure the contents of the list are accurate, however Sold Secure does not accept any responsibility for loss arising from decisions based upon it or the loss of any property which was protected by a security device bearing the Sold Secure logo.

For updates to this list see our web site: www.soldsecure.com

© Sold Secure 2011

* N.B. Sold Secure take no responsibility for the wording and content of the description of products within the catalogue. This rests entirely with the supplier of the product.
Alley Gates

The Alternative Eng. Partnership Ltd
Alley Gate & Double Gate
T: 0151 427 1084  W: www.theactiongroup.co.uk

The system has been designed and developed with high security and a low cost of total ownership as 2 key attributes. Key features include:

- A more robust and refined product
- Complies with new 2004 Disability Discrimination Act
- Longevity of product means reduced total life costs
- High resistance to burglars and vandal attacks
- Low maintenance costs
- Resident and disabled user friendly.

ARW Contracting Ltd (Barford Engineering)
Balmoral Alley Gate
T: 0845 644 2486  W: www.alley-gate.co.uk

Iron-Man Gate – strong, robust, unique design for total satisfaction

- Manufactured from galvanised based steel sheet for long life and coated with stove enamel paint
- Tried and trusted product
- Independently tested to Sold Secure Standard
- Opportunity to customise unit through laser cutting process (illustration above has Vale of Glamorgan Logo)
- Low maintenance and easy access
- Massive reduction in crime and anti-social behaviour after installation

## Caravan Diamond Wheel Locks

**AL-KO Kober Ltd**  
**AL-KO Secure Caravan Wheel Lock**  
T: 01926 818500  
W: www.al-ko.co.uk

The AL-KO Secure Wheel Lock is available now for selected 2006 model caravans. It has been tested to the new Diamond Wheel Lock Standard and marks a considerable development in Caravan Security. The lock system has over 30,000 security combinations and is highly portable and easy to use.

The lock is drill resistant and has the added benefit of a registered key management system. Insurance companies are starting to recognise this superior theft deterrent and are offering considerable insurance discounts for fitment of the product.

**Winterhoff GmbH (Available via SAS Products)**  
**Wheel-Lock Diamond S2504-7**  
T: 0117 9374747  
W: www.sasproducts.co.uk

Fits most post-2004 Explorer Group Caravans  
Supplied with easy to fit (DIY or Dealer-fit) retro-fit lock adapter  
BPW/Explorer Group approved  
Locks wheel solidly to caravan chassis  
Fits easily in seconds  
Secure lost key procedure in place

### Chains

Pragmasis Ltd
Protector 8mm Chain
T: 01827 286267 W: www.torc-anchors.com

The Protector 8mm chain is a versatile long-link design made from high grade hardened boron steel, and is surprisingly resistant to sawing/cutting, cropping and hammering attacks despite its light weight. International standard European steel with top-grade British heat treatment and finishing. It is bright zinc plated and de-embrittled for maximum longevity and is supplied with a tough sleeve to protect your valuables. Not as tough as the 11/13/16/19mm chains but much more portable and easier to handle. Recommended for low-medium value bicycles and similar applications, especially where portability and ease of handling are required; not recommended for motorbike use.

The Protector 11mm chain is a versatile long-link design made from high grade hardened boron steel bar, and is highly resistant to sawing/cutting, cropping and hammering attacks. The long link design means it is lighter than many competing chains of similar or even smaller gauge. International standard European steel with top-grade British heat treatment and finishing. It is bright zinc plated and de-embrittled for maximum longevity and is supplied with a tough sleeve to protect your valuables. Not as tough as the 13/16/19mm chains but much more portable and easier to handle. Recommended for medium value bicycles and similar applications, including as a carry chain; not recommended for motorbike use.

The Protector 13mm chain is a versatile long-link design made from high grade hardened boron steel bar, and is highly resistant to sawing/cutting and hammering attacks. It is bright zinc plated and de-embrittled for maximum longevity and is supplied with a tough sleeve to protect your valuables. Not as tough as the 16mm or 19mm chains but more portable and easier to handle. Recommended for high value bicycles, rural/equestrian security and similar applications or as a motorbike carry chain; not recommended for motorbike home security.

The Protector 16mm chain is a versatile long-link design made from high grade hardened boron steel bar, is guaranteed “impossible” to bolt-crop by hand (even with 42” croppers) and is highly resistant to sawing/cutting and hammering attacks. It is a very highly specified and rated chain: International standard 16mm European steel with top-grade British heat treatment and finishing, awarded Sold Secure Gold approval in every category. It is bright zinc plated and de-embrittled for maximum longevity and is supplied with a tough sleeve to protect your valuables. Recommended for motorbike home security, plant/commercial/agricultural security and similarly demanding applications.

</table>

The Protector 19mm chain offers the ultimate security deterrent! It is a versatile long-link design made from high grade hardened boron steel bar, is guaranteed “impossible” to bolt-crop by hand (even with 42” croppers) and is exceptionally resistant to sawing/cutting and hammering attacks. It is the highest rated chain on the market: International standard 19mm European steel with top-grade British heat treatment and finishing, awarded Sold Secure Gold approval in every category. No Far Eastern material of unknown composition here – This is high grade stuff! It is bright zinc plated and de-embrittled for maximum longevity and is supplied with a tough sleeve to protect your valuables. Recommended for very high value motorbike home or exposed security, military/plant/commercial/ agricultural security and other extremely demanding applications.

### Pragmasis Ltd
- **Torc Ground Anchor Series II**
  - T: 01827 286267
  - W: www.torc-anchors.com

- The Torc Ground Anchor Series II uses four high tensile fixings for maximum strength without requiring an industrial drill to fit. It is an easy fit with DIY tools to concrete floor, brick wall or van/bike safe.
- It is British made, uses four high tensile fixings for maximum strength without requiring an industrial drill to fit (a drill bit is included), and is the only ground anchor that is Sold Secure Gold approved in every category (Concrete Floor fitting, using hi-tech but still easy to use chemical resin capsules - these are actually easier to fit and much stronger than expanding bolts!). It uses a 20mm hardened steel shackle that folds flat when not in use. The shackle forms a complete ‘D’, meaning that a thief would have to cut it twice in order to defeat it - that would be two cuts through 20mm diameter hardened steel! The Torc ground anchor is designed to suit 16mm/19mm and other high security chains. Zinc phosphate treated and powder coated for corrosion resistance.

The 550 series has been specifically designed for use where the strength of the padlock is a priority. The fully enclosed hardened steel shackle prevents any attack by conventional bolt cutters and the solid hardened steel body prevents attack by drilling or sawing to a high degree. The hardened steel anti-drill plate protects the CEN grade 4, 6 pin cylinder which is fitted as standard and fully replaceable. AS the cylinder is easily replaceable the padlock can be master keyed, or keyed to customer specification. The padlock body is weldable steel so permanent fitting to security gates is possible.

- Useful handle function within the design
- 80mm round close shackle padlock

Pragmasis Ltd
Shed Shackle
T: 01827 286267   W: www.torc-anchors.com

The Shed Shackle is a unique product that improves security for wooden sheds. The Shed Shackle reinforces such a large area of the wooden wall of the shed so that it becomes a viable anchoring point. Unlike a conventional ground anchor, the Shed Shackle doesn’t require a heavy concrete floor to the shed and actually improves the strength of the woodwork - your shed becomes steel reinforced! British made.

Zinc phosphated and powder coated for corrosion resistance. Modular and versatile design. Easy DIY fit with drill bit, fixings and comprehensive instructions included.

For Your Nearest Stockist Call: 01332 274252 or Email: sales@moorelarge.co.uk
The Master Locksmiths Association was first conceived in 1957 and was the idea of the Chubb Lock Company and one or two London Locksmiths. The prime mover was Mr. Steve Fallshaw, then a locksmith in The Barbican, who became its first Chairman when it was formally founded early in 1958. The original sixteen members decided the new ‘association’ should be known as The Greater London Master Locksmiths Association (GLMLA).

By the end of the first decade it had grown nationally with a wide distribution of members from all parts of the United Kingdom. At this time it elected its first national President namely Mr. Steve Stephens of Oxford. The association by now included members from overseas and a healthy growth has been maintained, we now number almost 1500 members in all sectors.

In the early 90’s the association restructured to meet modern demands, retaining its title Master Locksmiths Association (MLA) it formed three sectors. They are the ‘British Locksmiths Institute’ (BLI) for its individual members’ skill qualifications, ‘Guild of Keycutters’ for all producers of keys wishing to comply to standards and ‘Approved Company’ for trading companies. The fourth ‘Affiliates’ sector remained unchanged and represents the manufacturers’ and suppliers to our industry.

Companies and locksmiths trading in their own right, with retail premises or operating as a mobile locksmithing business, join the MLA Approved Company sector. It is this sector of the Association that trades directly with the public and private sectors in the High Street and through Yellow Pages, and other advertising media.

The Approved Companies inspectorate means the MLA can demonstrate that all Company Members are meeting high standards. Each company is inspected on a regular basis, thus ensuring that its members and their operatives maintain standards in workmanship and administration. Also members are expected to conform to legal requirements and that customer charters exist to service customer satisfaction.

Inspections have the effect of making locksmithing companies more accountable for their daily operations. Approved Company members are made aware that the MLA considers that training is also a valuable means to maintaining standards. Training is offered at the purpose built, state of the art training facility at the MLA’s Head Office in Daventry.

Continued growth of the Approved Companies ensures that the MLA can offer a national network of locksmiths and the Associations head office in Daventry refers enquirers to their nearest approved company. A National 0800 number enables potential customers to find the nearest member quickly or check those companies displaying the MLA logo are bona fide members.

The Logo depicted here is the one that is advertised by an approved company on their premises, vehicles and stationery, confirming to the public the standards expected of them.

Channels of arbitration exist to fully investigate any complaints or disputes, should they arise, and the MLA advises or takes any necessary action. The Board of Directors continually looks at consumer matters and advises members when appropriate.

The Approved Company sectors operates schemes whereby discounts may be available to policyholders of most well known insurance companies and they provide the service behind many major help-lines.

The Master Locksmiths Association “Approved Company” helpline is available to locate your nearest locksmith: — 0800 783 1498

With every day tools, a burglar can break in through a standard door cylinder lock in approximately 30 seconds.

The ABS cylinder has built in Snap Secure technology that ensures that if the door is attacked, the cylinder snaps from the outside and blocks access to the internal mechanism of the door lock.

The ABS cylinder keeps burglars out, and even after snapping it is still fully operable from the inside meaning it is also safe.

Find your local Elite ABS Key Centre at:
www.abs-secure.co.uk

Branches in Manchester, Yorkshire, Lancashire, Staffordshire and London

Shieldcom Engineering have supplied and fitted over 10,000 Alleygates to local authorities including Merseyside, Cheshire, Cumbria, North / South Wales, Staffordshire.

"Alleygating" is a method of controlling access to alleyways surrounding residential and business properties. This controlled access is achieved through the installation of strong lockable gates and fencing placed at strategic locations within the alleyways, with access restricted to residents and public services.

Shieldcom Engineering Alleygates have Sold Secure status. These gates are recommended by the Association of Chief Police Officers (ACPO) initiative, which aims to reduce crime through effective environmental design and the installation of security products that meet police-approved standards.

Shieldcom Engineering Alleygates achieved the highest security level of Sold Secure, and are proven to resist the highest level of vandalism, preventing future attacks and remaining a highly effective deterrent.
